Hope this email finds you doing well. It was our pleasure to meet with you all last week.

What I failed to mention to Jared in his email is this important information that is thrilling to me. Tomorrow I will meet with Bret Allen, Environmental Scientist II, Nevada Department of Agriculture to do water sampling along the Walker River and Wabuska Drain gages.

They are thinking of three dates: One in March (tomorrow), one day late in April or May to deploy the POCIS filters and four weeks after that date to extract the filters.

This is great news for us, since water is to be released on March 15 and April 17, 2016.

What I was also talking to fellow staff folks is about the need to clean our riverbeds. All the overgrown weeds and vegetation prevents good water flow to our ditches.

It was also reported to me this morning, there are over thirty beaver dams at the lower dam where we took you to. That is a huge problem all along our river.

I am very busy responding to other areas in our environmental department, but I would like to ask some questions next week in regards to opportunities for us.

Best Regards,

Cynthia Oceguela
